Saw Kyaw Myint

Skills

Frontend

Javascript, Jquery, Vue js, React, js, Apline js ,Websocket

Backend

PHP, Laravel , Livewire, Ruby on Rails

DataBase

MySQL, Prisma

Design

Bootstrap, Tailwind css, shadcn ui and othder Ui libraries

Project Experience

Exam TEST (Laravel ,vue , Inertia js, MysQL)

 This project is designed to test the IQ of entry members and to share knowledge with other members. If a user's device is closed for some reason during answering, they can resume from the current question when logging in on a new device. I gained experience using Laravel's caching features with various advanced technologies in both Vue and Laravel.

Forum (Laravel , Apline js, MysQL, Websocket)

It similarly to Stack Overflow. It includes real-time notification features, a collaborative editing system, and a reputation-based ranking system that rewards user contributions. Users can ask and answer technical questions, vote on responses, and earn badges for their participation. The platform also supports code formatting, tagging for better content, and a moderation system to ensure high-quality discussions.

Reporting System (Laravel , Inertia js, React , MysQL)

This system is designed to report to the manager. It includes three roles: member, leader, and manager. Members report to leaders. When a leader reports to the manager, the system also sends the report to Microsoft Teams and Chatwork. Additionally, I have gained some knowledge about Laravel project server development and have also learned the React library.

Learning website (Php pure , React , MysQL)

This project is designed to store videos . It is written in pure PHP. I understand PHP OOP principles, explored SQL injection prevention techniques, and PHP video streaming functionality

<u>Data Analysis System (Go , Ruby On Rails , Vue , Java)</u>

This project is built with Go, Ruby, Vue, and Java and has won several SaaS awards in Japan. It is built on a scalable and leverageable microservices architecture. I developed the Vue.js frontend and Ruby backend, gaining knowledge of Ruby microservices architecture, large data management, SQL queries, background job management, and some AWS services, including SQS and SNS, as well as Vue and Ruby package development

Calculates kitchen item costs (Laravel , JQuery)

This is a Laravel and jQuery-based project designed to calculate kitchen item costs. I developed a history tracking feature, implemented dynamic URL updates, and fixed some bugs.

Store Item Management System (Laravel)

This is an ordering system built with Laravel API for managing store items. In this project, I configured Docker, set up a GitHub Actions workflow, and developed an API to manage item costs.

<u>Some other projects include:</u>

- An E-commerce platform developed with
  Laravel, jQuery, Livewire, and MySQL.
- A Medium-style blog built using Vue.js, Laravel, and MySQL
- Discord clone with Next js
